THIS WEBSITE
IS MY
PORTFOLIO

-hand coded-

So , who's it for?

This is Jamie...

Considering: all

Jamie is a close friend and a mentor to the owner of the personal site.

She is casually browsing a friends portfolio for fun and to understand her connections better for future references.

Target Audience 1

This is Helena...

Considering: select tabs

Helena is the owner of MLH consulting and is browsing potential candidates to pick as interns.

She is only on this cite to scope the qualifications of the user.

Target Audience 2

This is Justin...

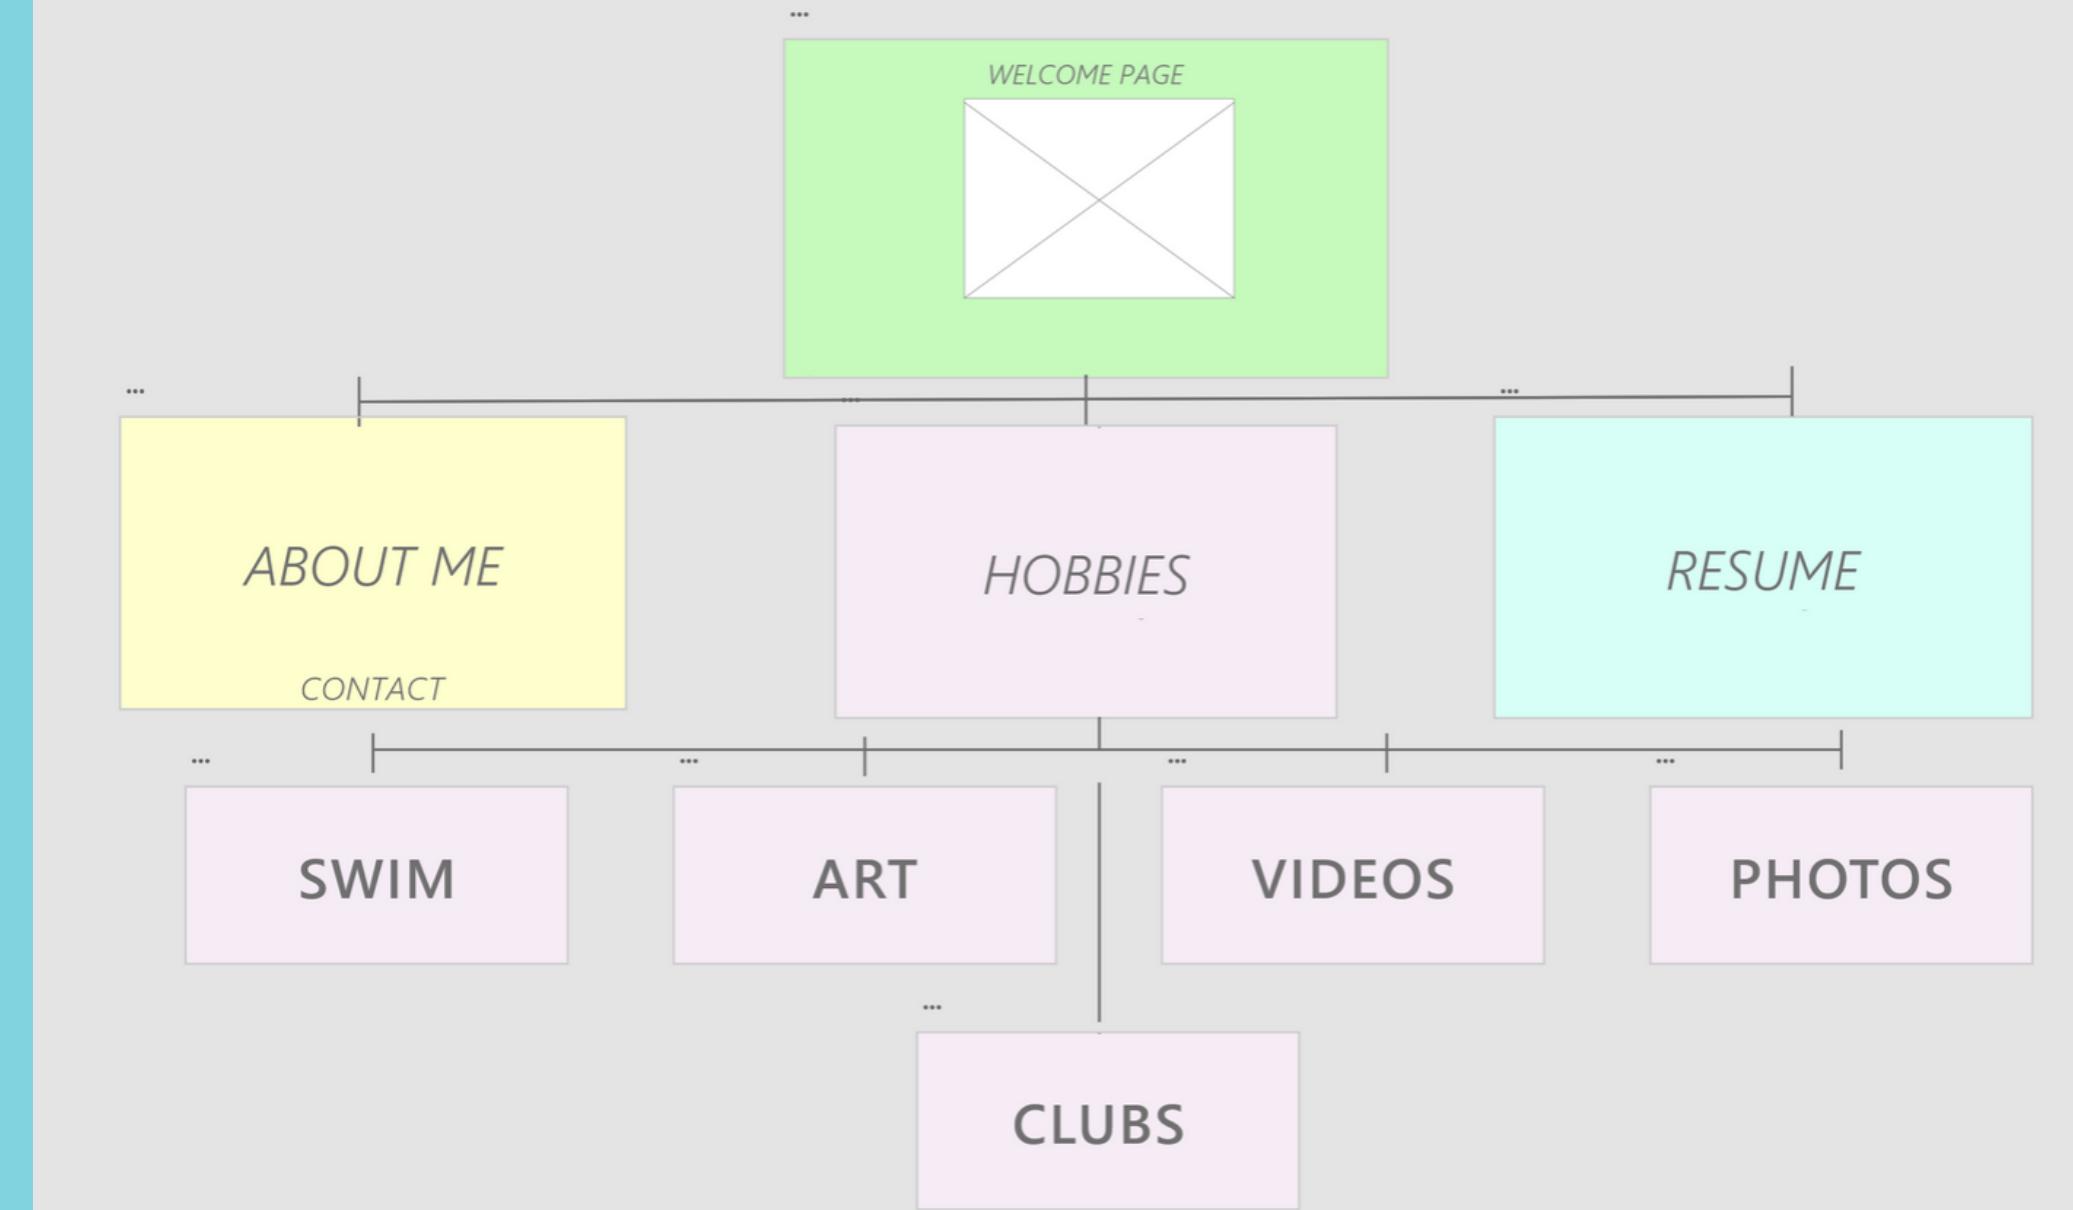

Considering: all + UX/design of cite

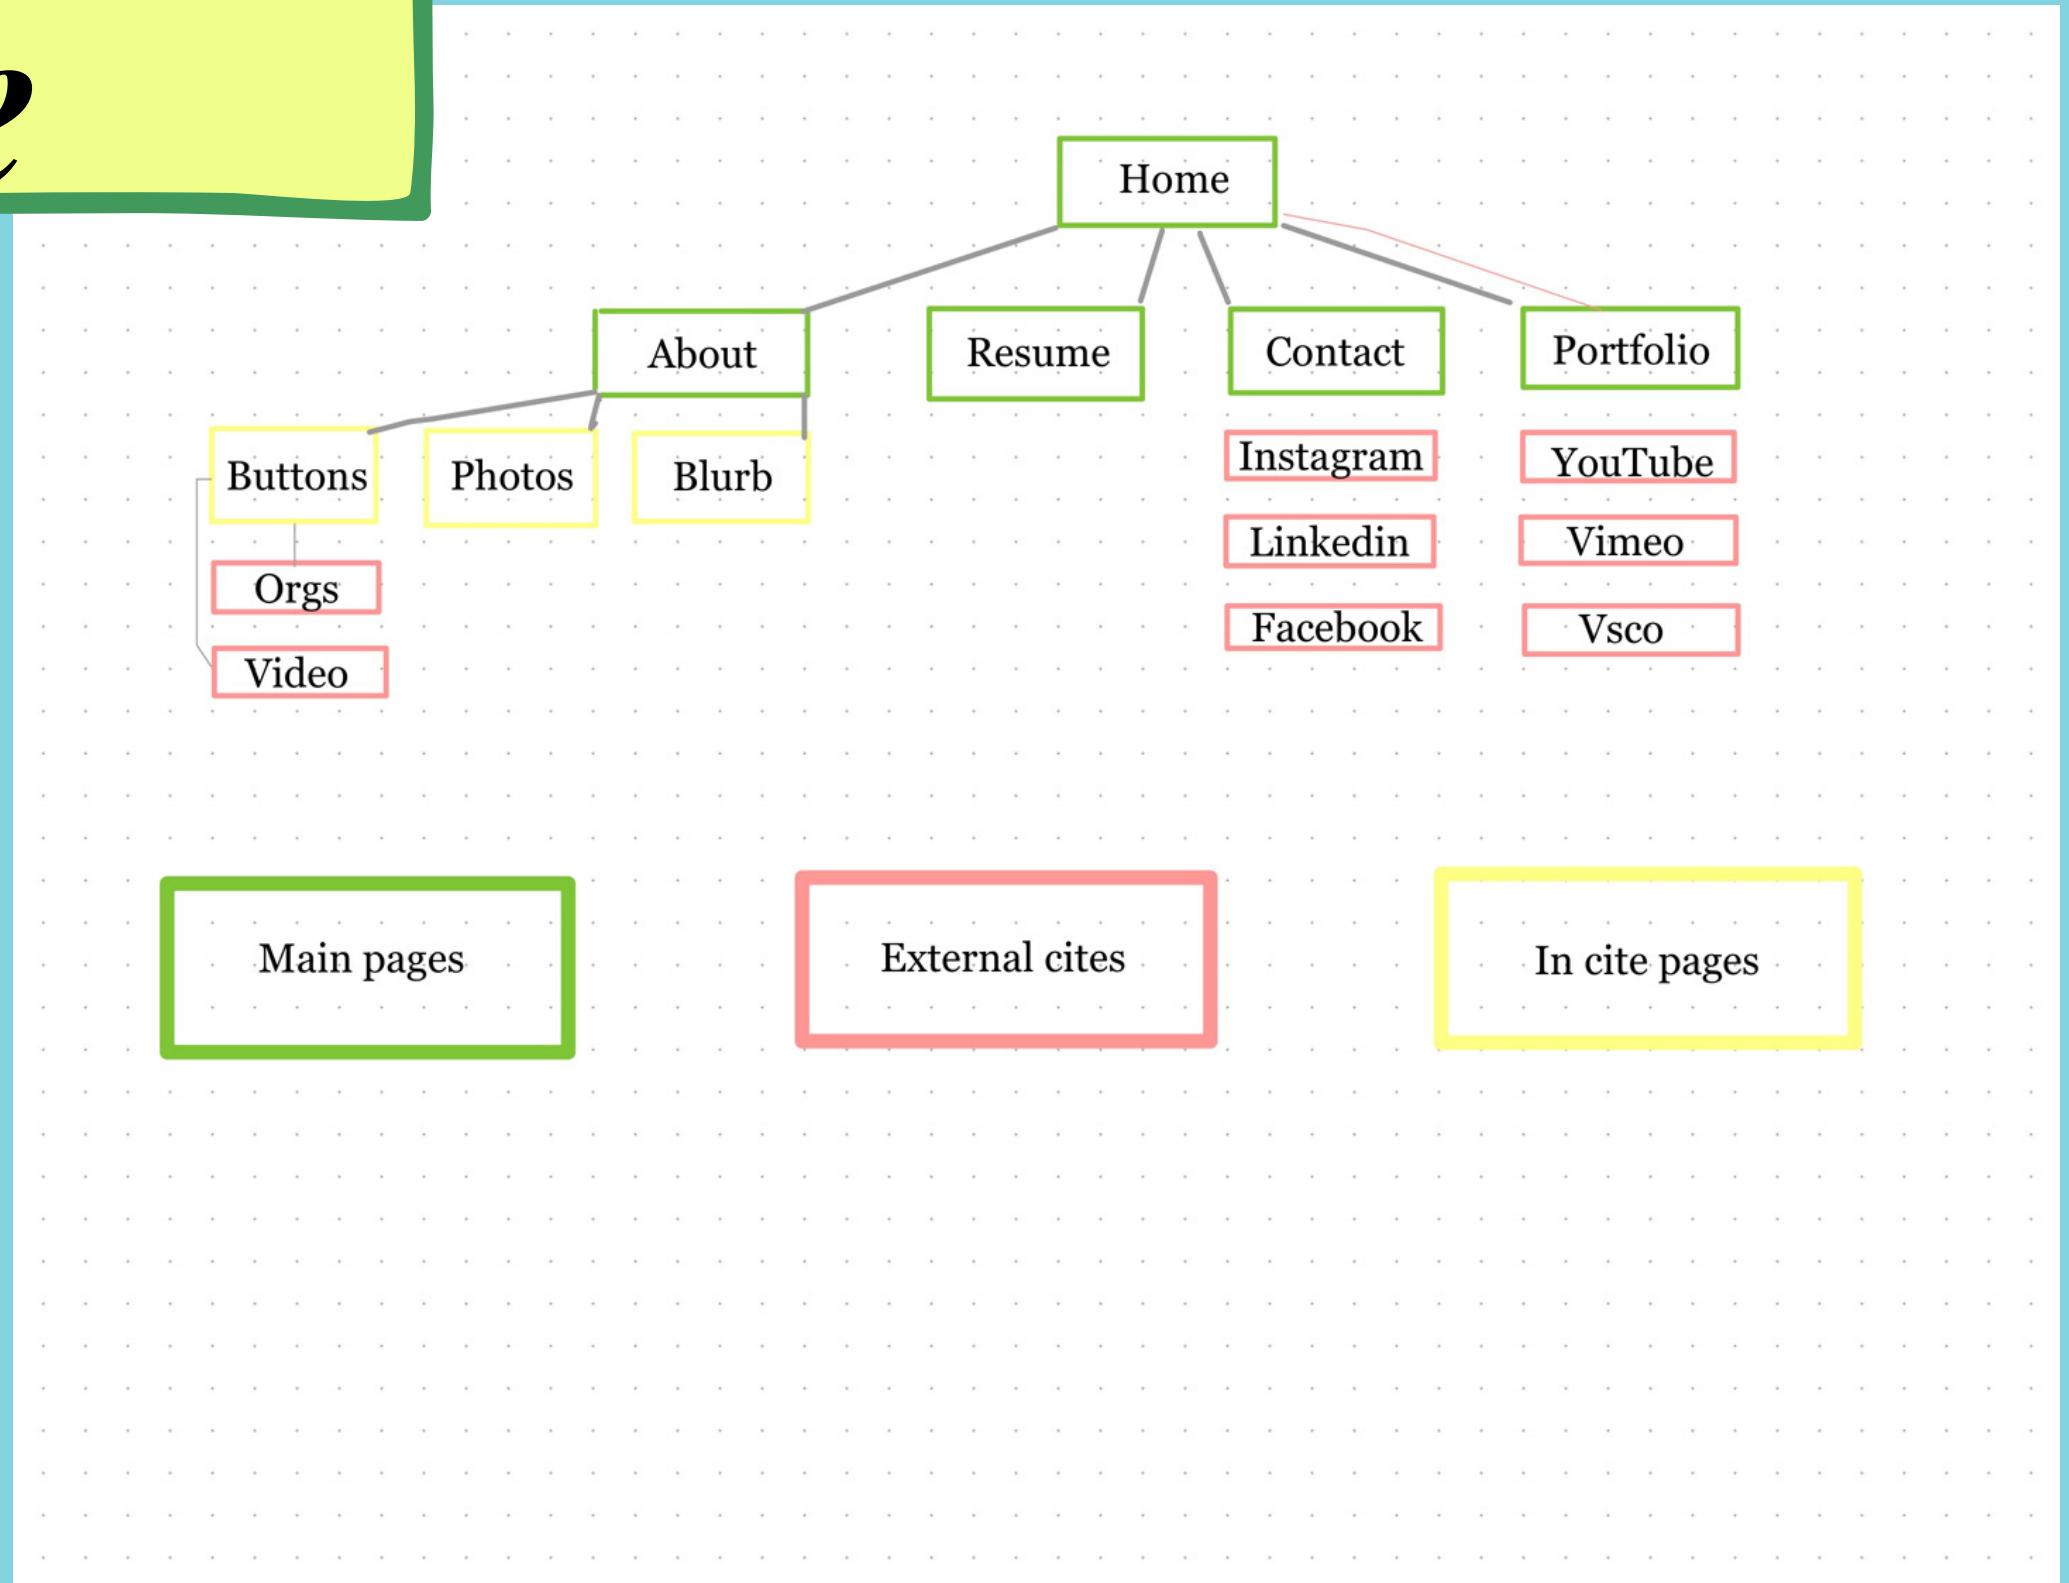

Justin is a recruiter for a small startup. He is looking for an intern that understands prototyping, can communicate well, and is hard working. He will be looking at the all aspects and tone of the cite. He will also try to reach out through the cite.

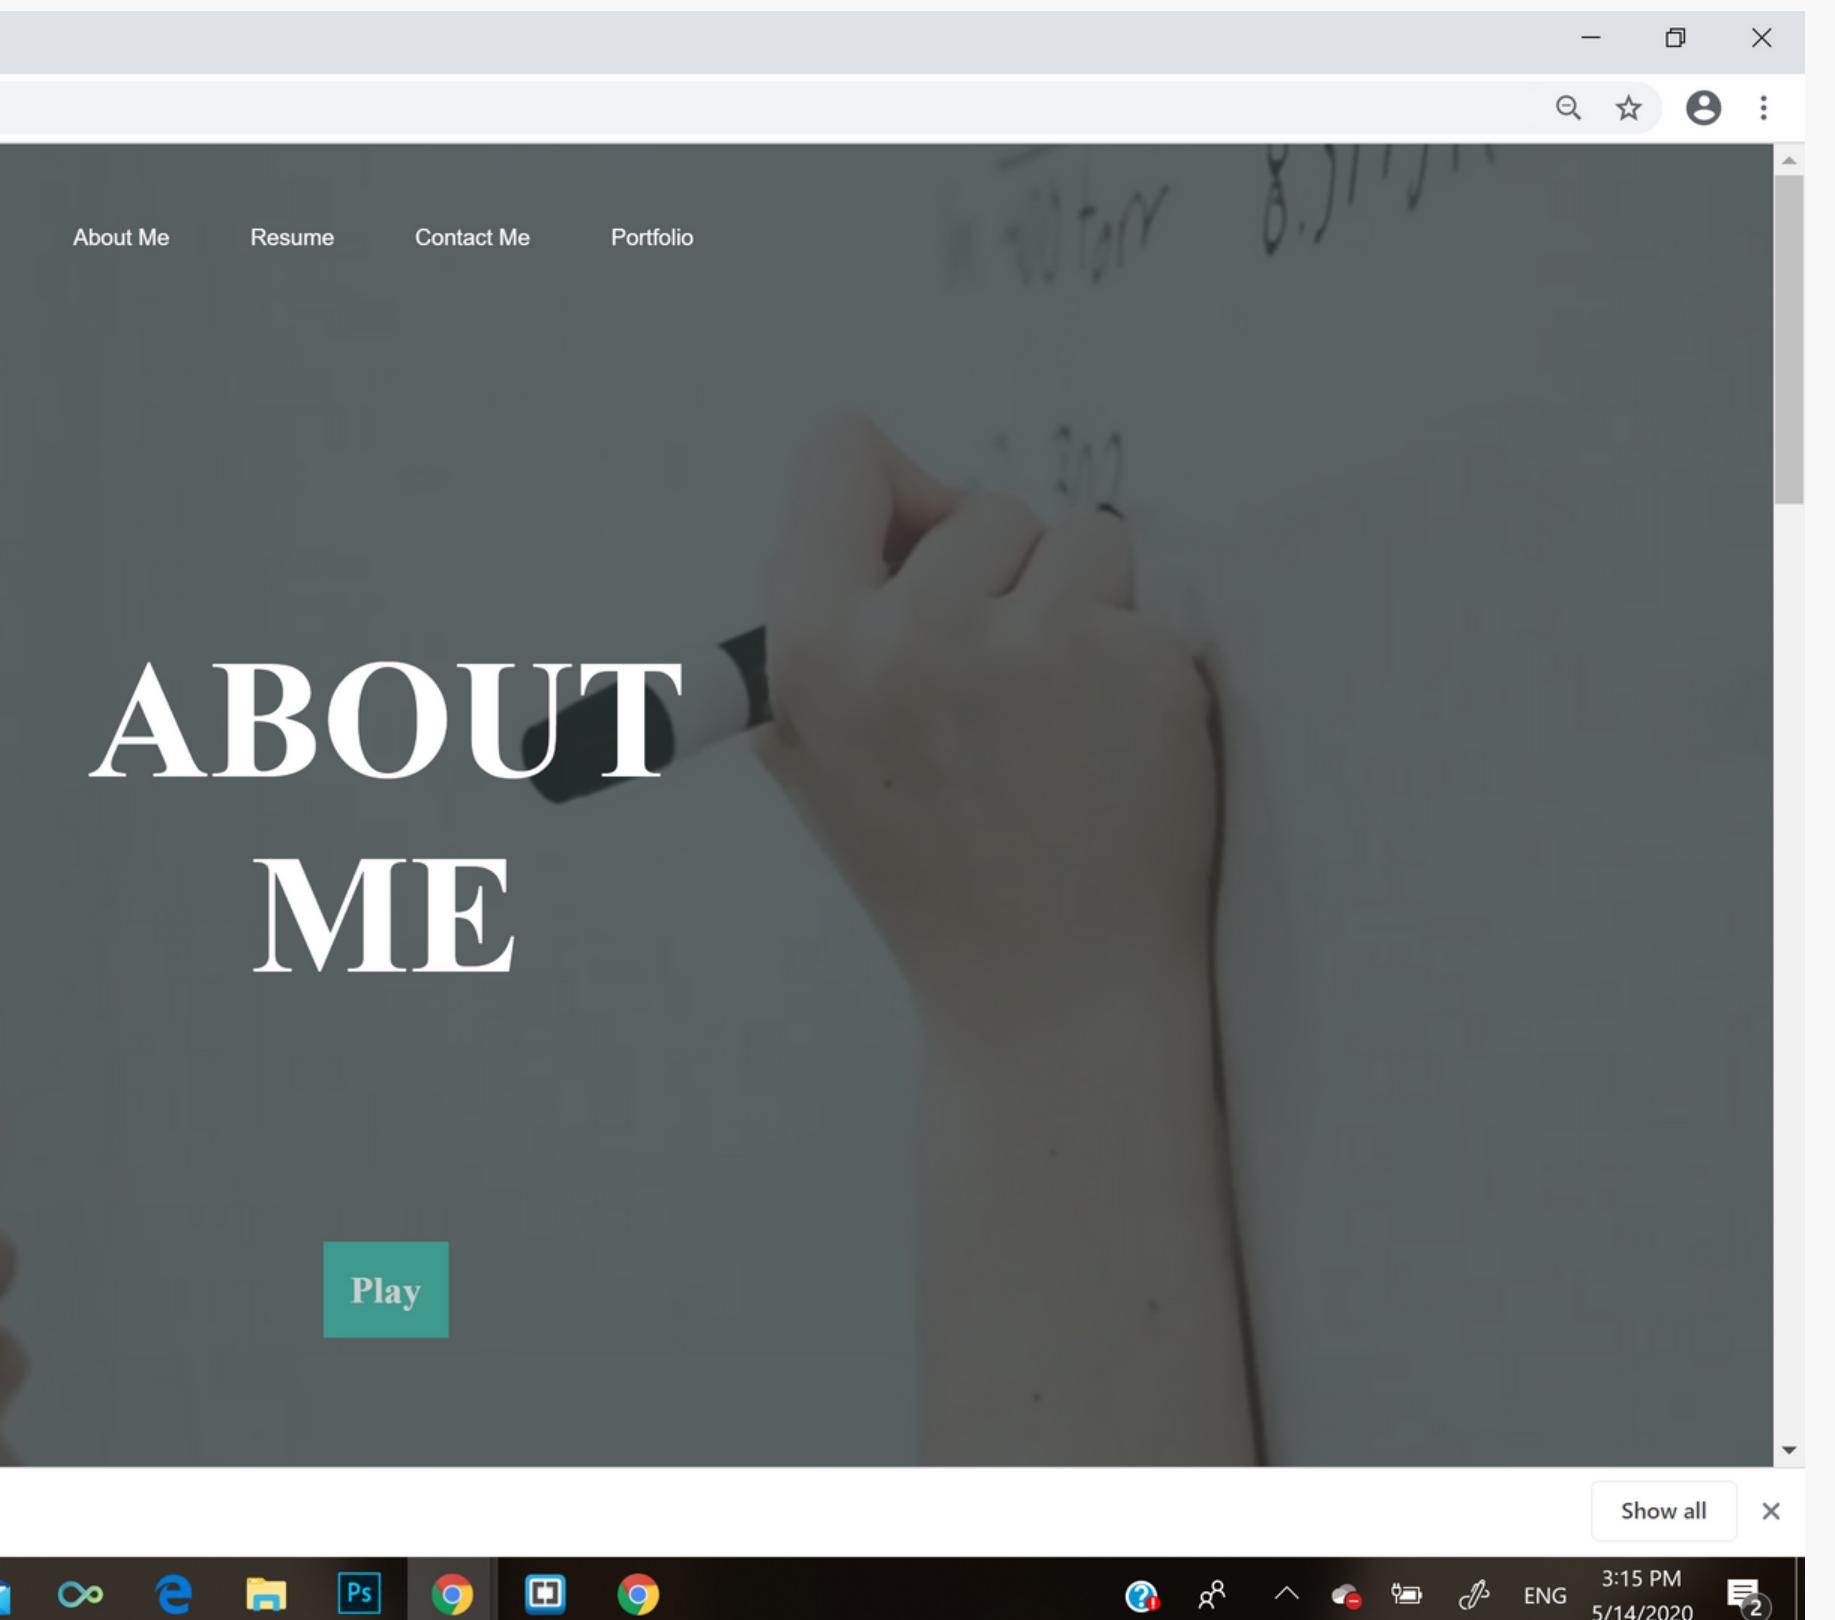

Target Audience 3

The Original

The Update

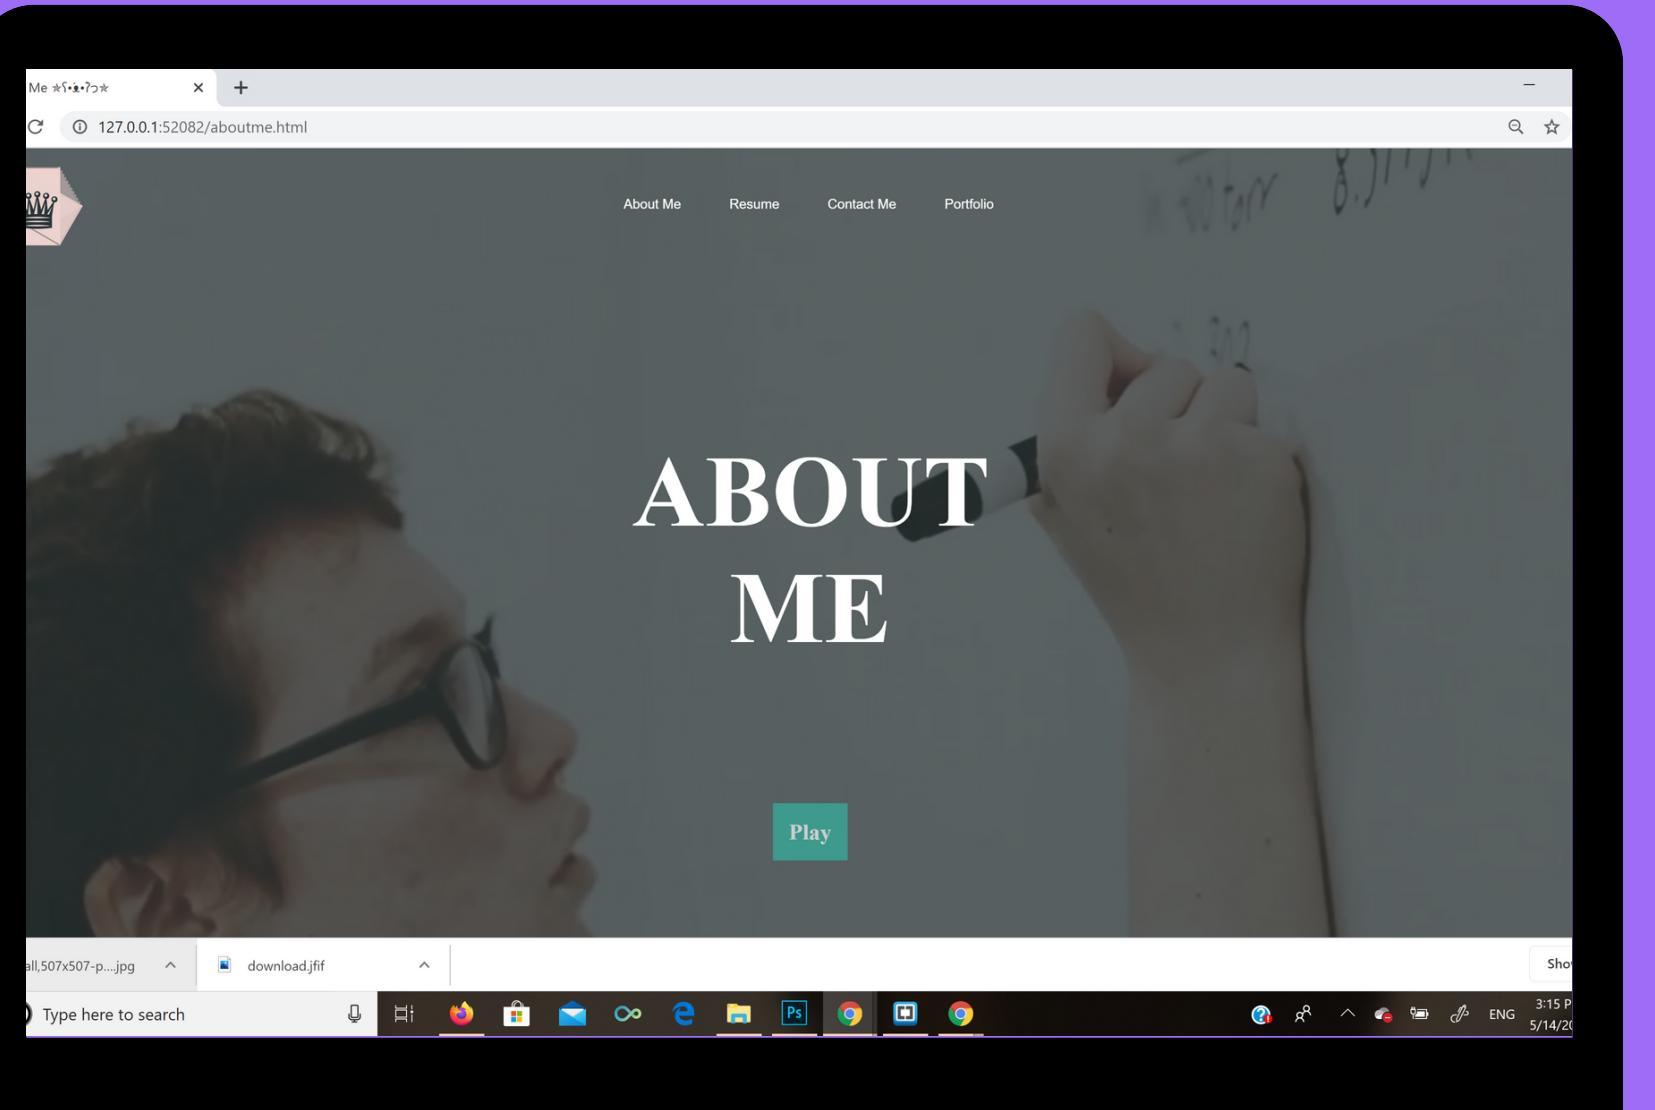

The Purpose

PORTFOLIO

I want to use this site for recruiters and applying to internships.
But I found that it works for showing people what I love to do and to display my work.

STYLE

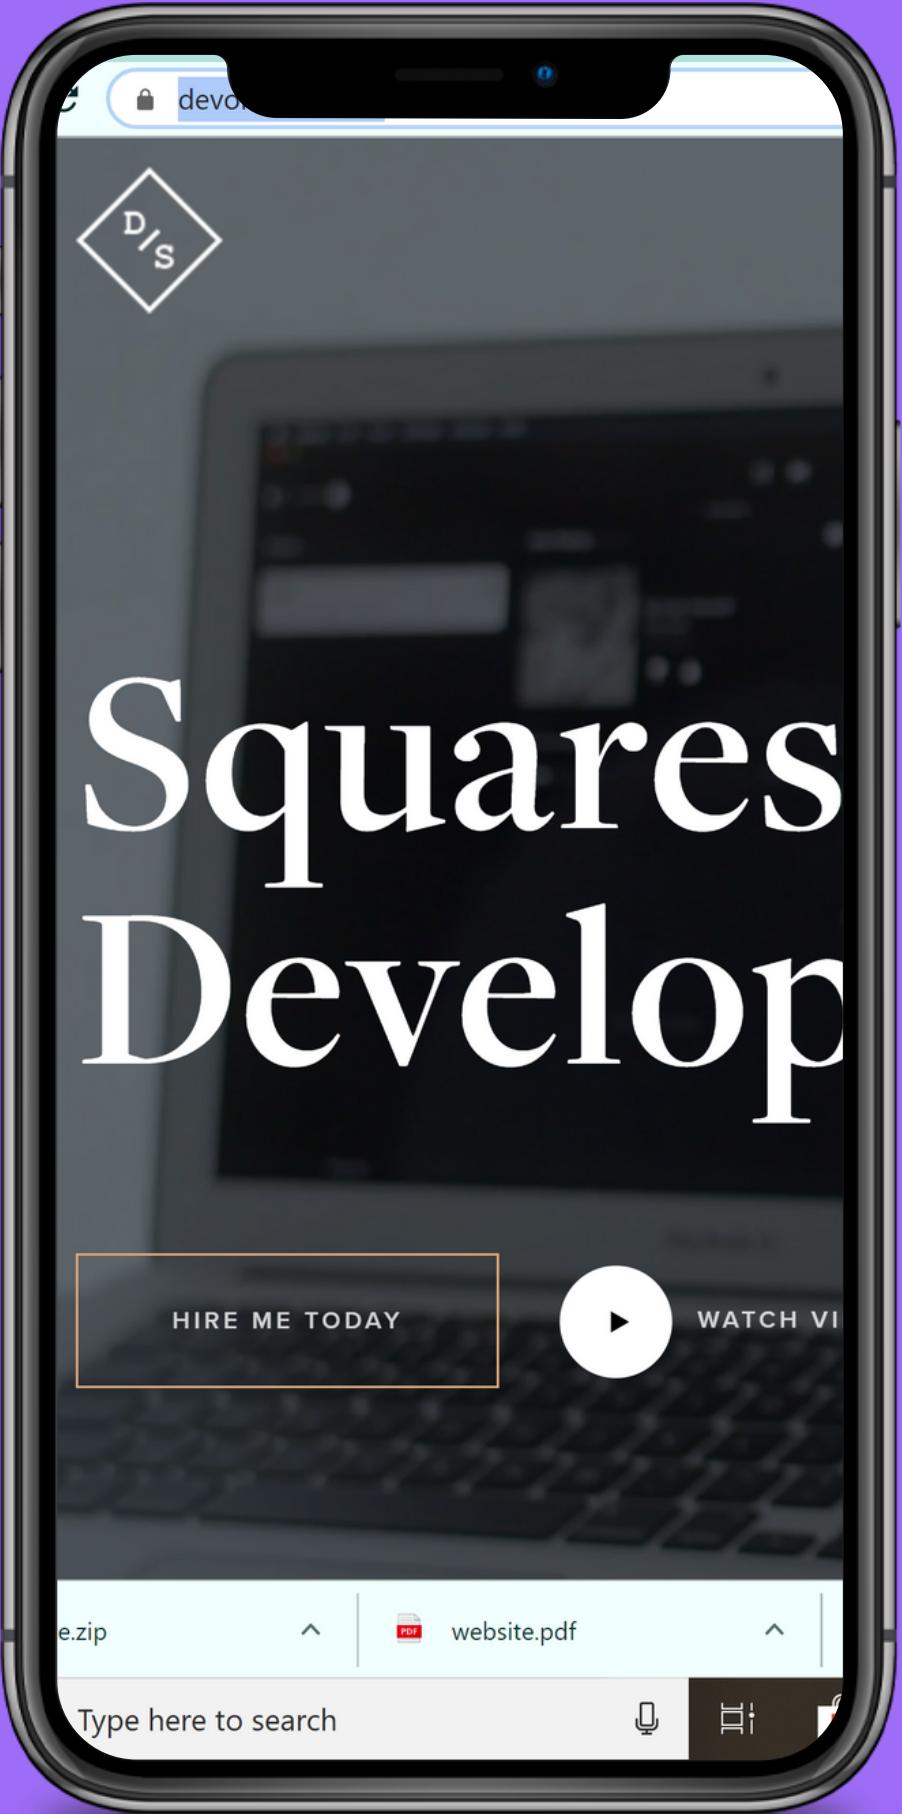

Minimal. I want my style to be minimal and to see if I could keep it to one font.
Just as the three other reference pages :
Devin Stank
Ian Ander
Garry Shen

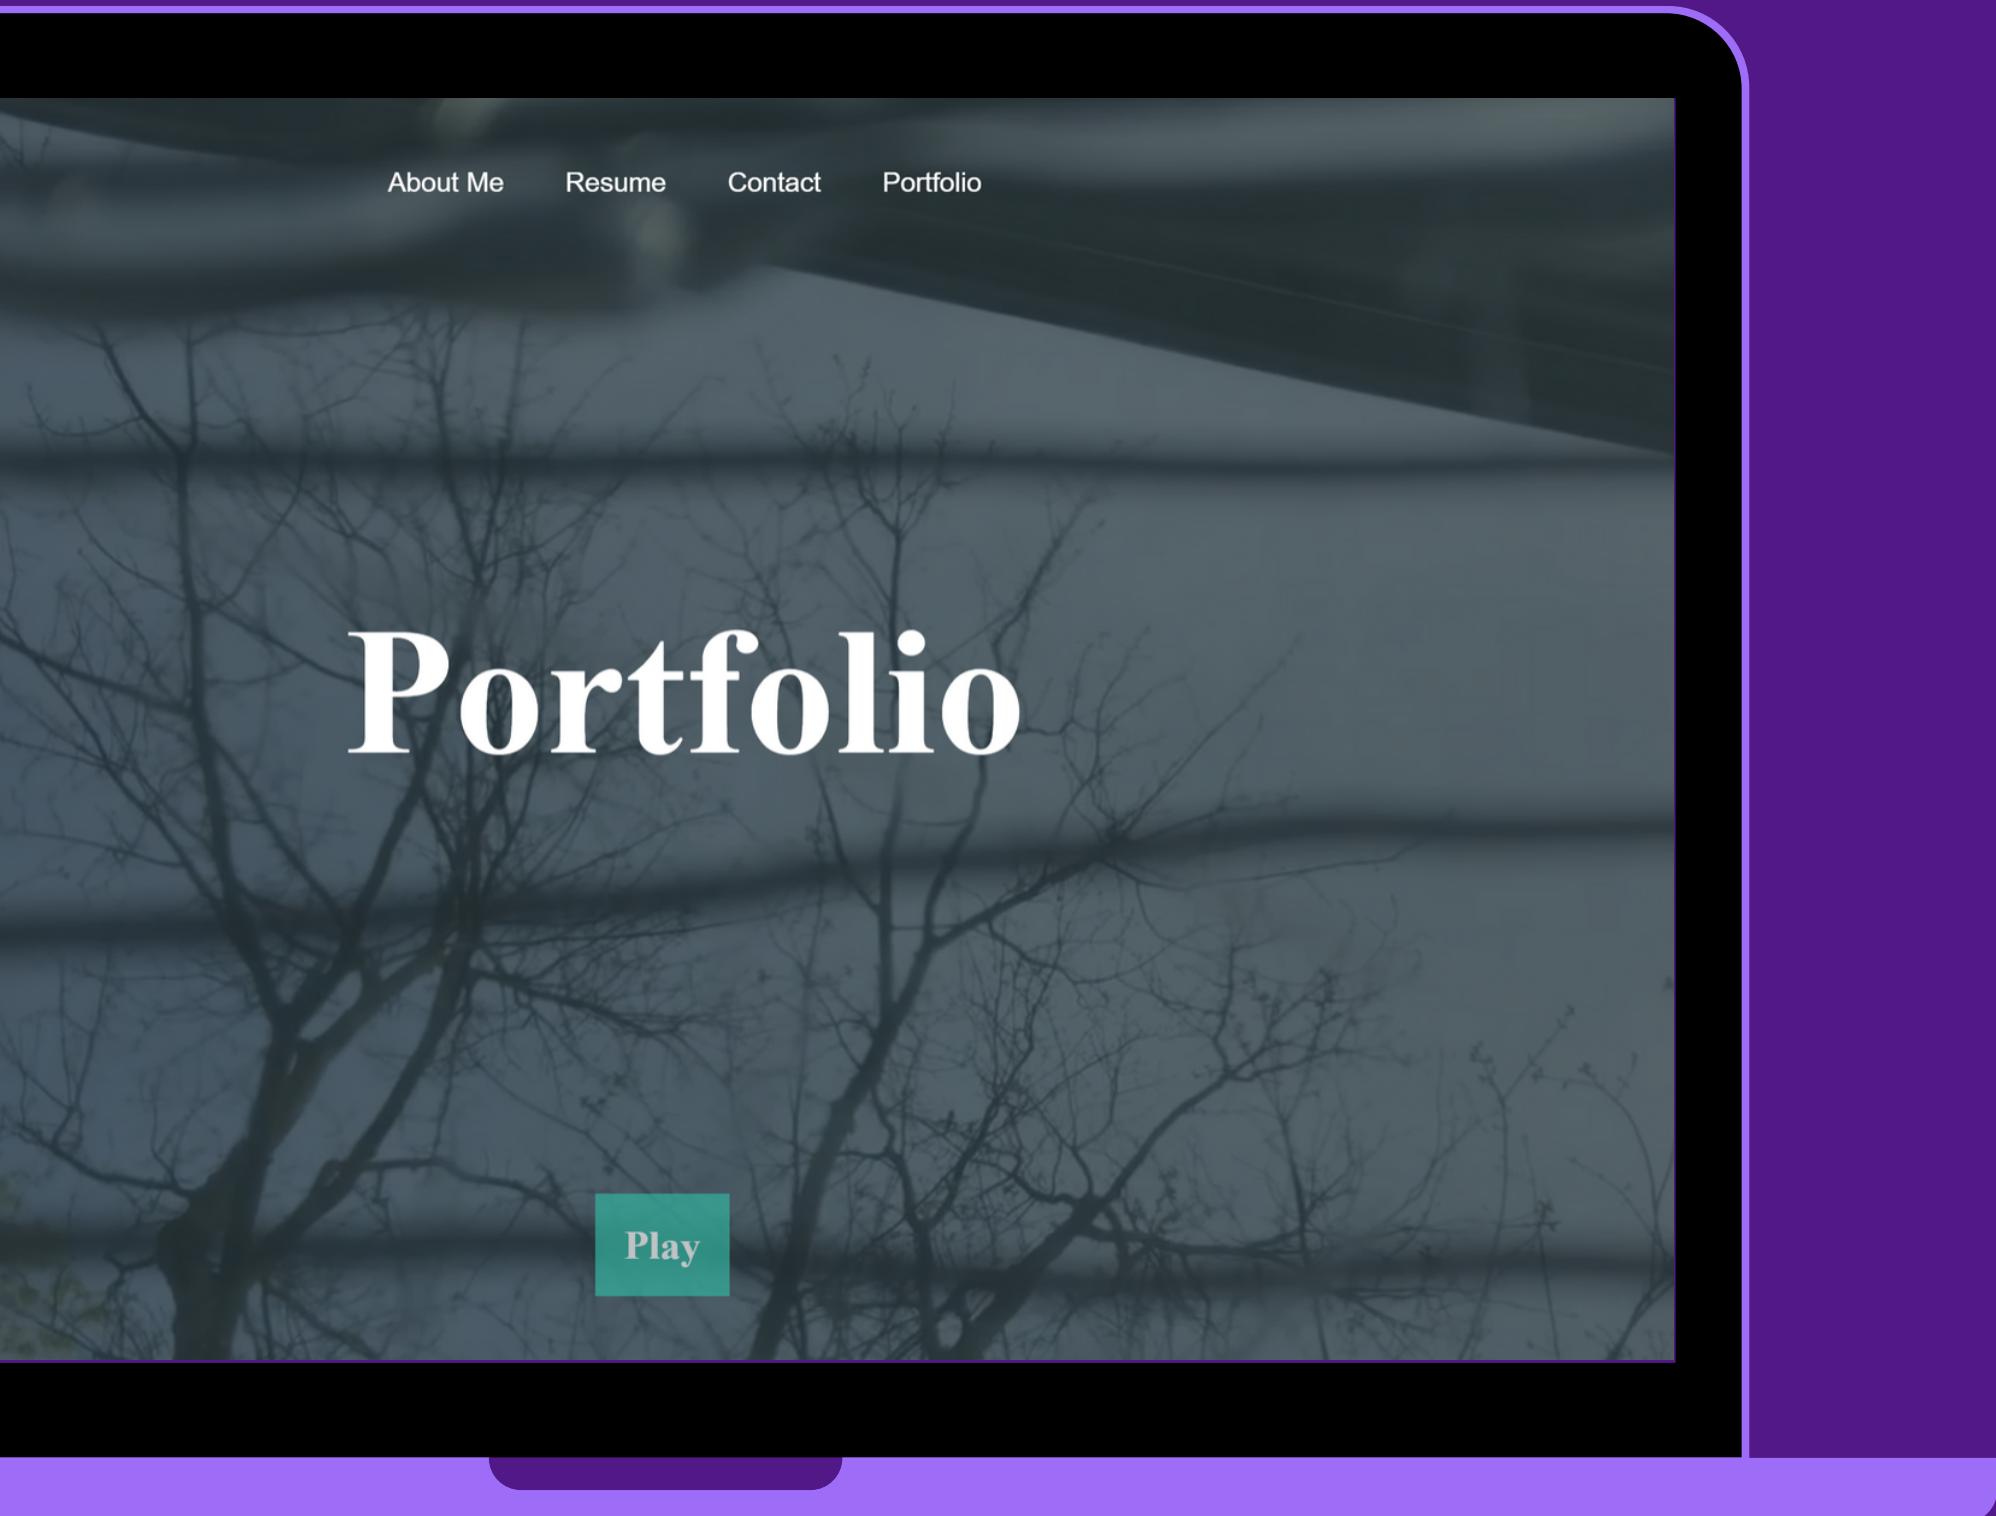

Images

Rhythm color: #273537; #EDD3CF
Overlay w/complementary colors

& Design Principles

JAVASCRIPT / INTERACTIVITY

- I used a lot of SVGs and animations with JSS
This was also in Lora and used the complementary colors. I am excited to use them because, even for the creator it is fun to see!
- I decided to change the first page that the user sees for each page. I decided to add an overlay of #273537 on a video to make it seem minimal and sleek.
- After you scroll from the overlay it goes to a BRIGHT screen to grab the users attention and to then use parallax scrolling to guide them down the web page.

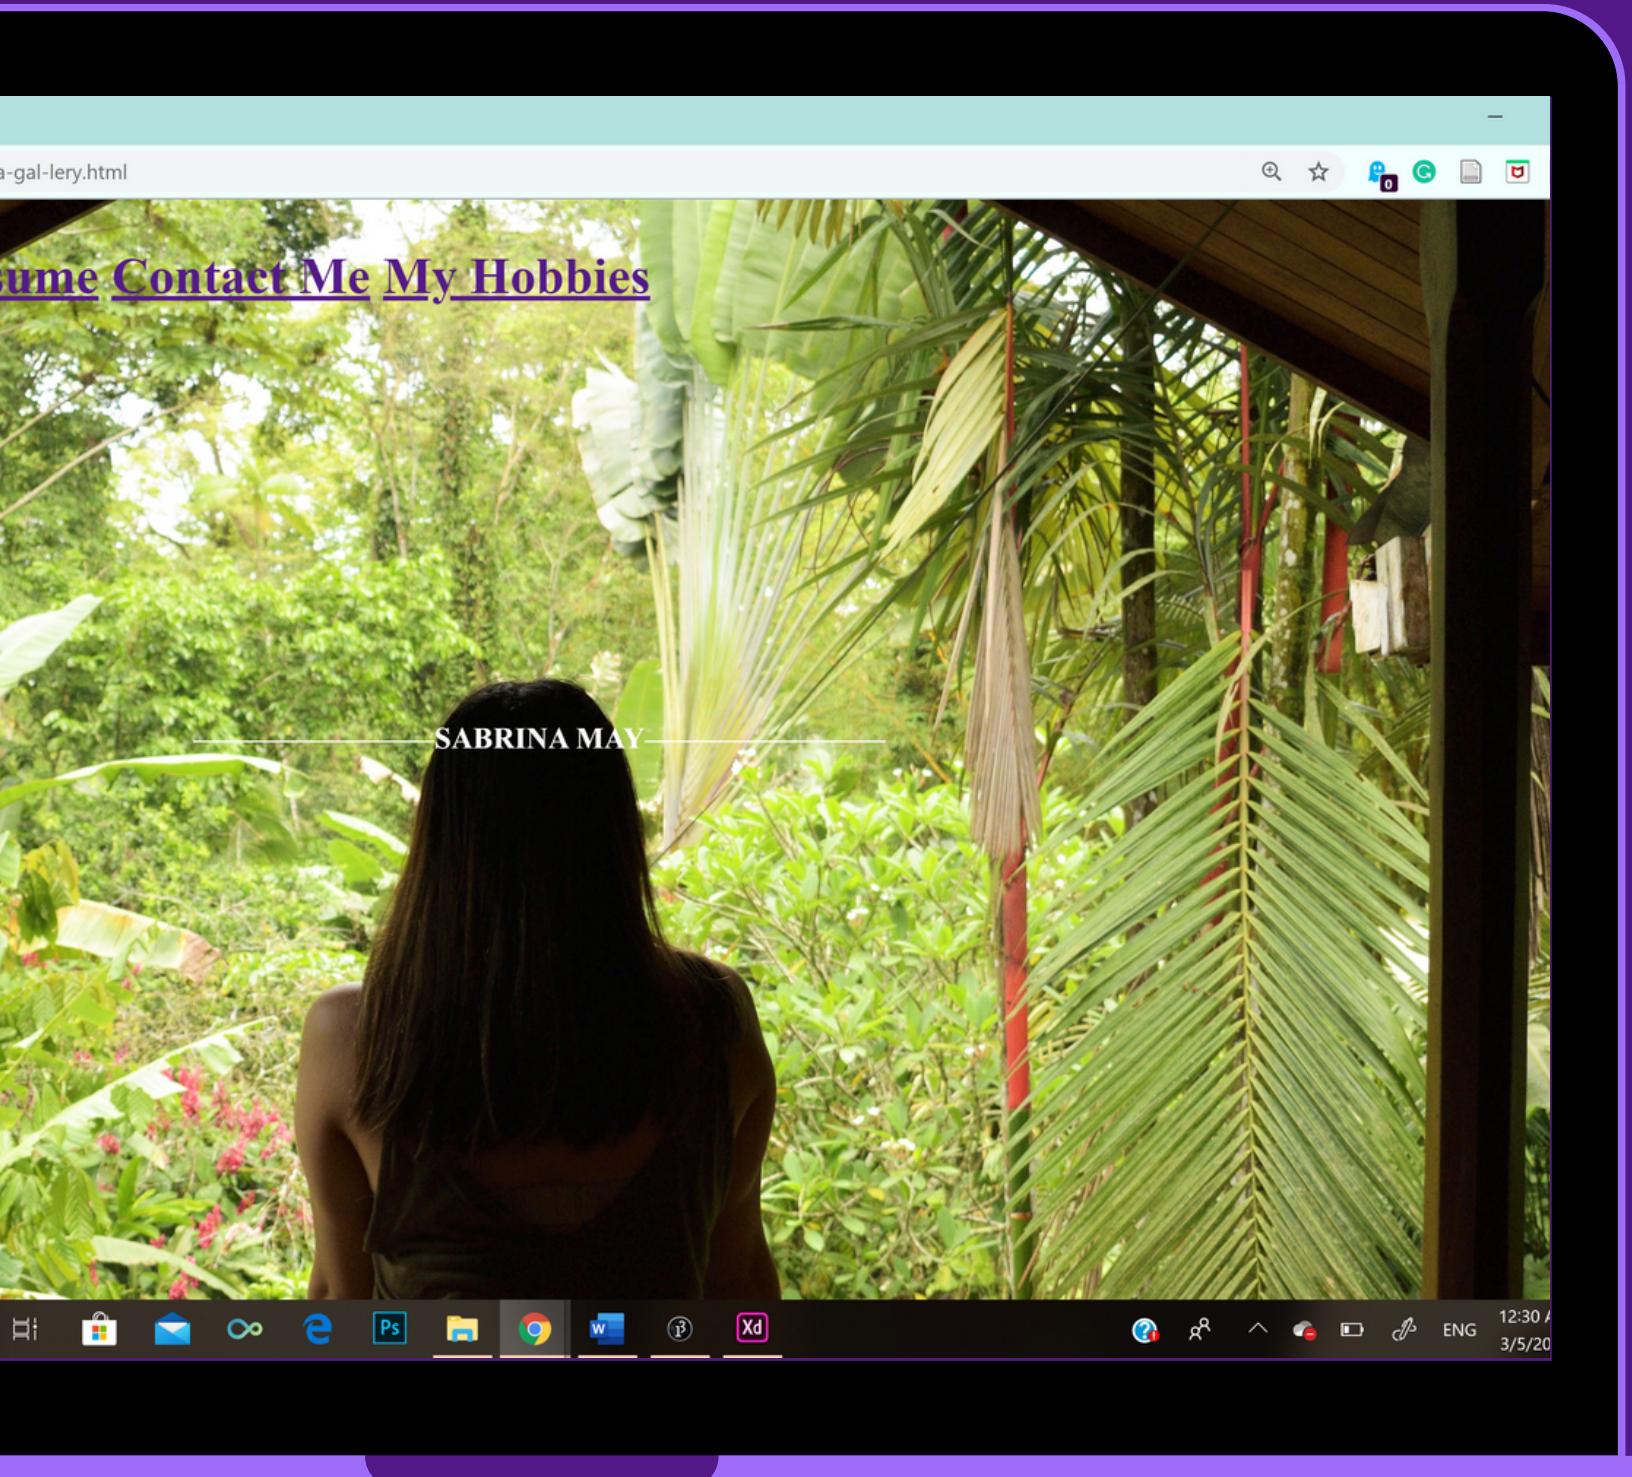

User Testing / Usability

I have attacked my friends ,family, and teachers to "TEST MY SITE"!

Some things:

- stop using cheesy backgrounds
- Use Fotorama
- It flowed well with the amount of content(yay)
- Add shadows to buttons
- CHANGE YOUR LOGO!

WHAT DO I MEAN?

Final thoughts

- I changed my logo to make it obvious that you can click on it to go to the home page and to space out my layout
- I got rid of some god AWFUL backgrounds
